

- a) In this website I implemented the boxslider plugin and the lightbox plugin for my front page. I also implemented a select menu widget for the user to create an account section. To make sure all the pages were accessible and easy to reach I implemented a navigation bar at the top of the website that stays consistent throughout each page. The color of each tab helps indicate what page the user is on. I chose colors that contrast well to help section off different sections on each page.
- b) Through reading the feedback I received I knew I needed to improve the alignment of the user page as well as adding more elements to help users understand what the purpose of my website was. For the first critique, I improved the alignment of each element of the user page and put them in separate div elements to make it easier to read. For the second critique, I added the box slider plugin and some testimony like images to help better convey the purpose of my website.
- c) I think my website meets the needs well but it is not perfect. The elements like the pet search page and the user page meets the main purpose of the website. However, there is much more to be added to improve the experience of users. Future plans for this website includes implementing a "Meet The Team" section and overall adding more content for users to read and learn more about the rescue center.
